### Question No. 1

In the remote disaster recovery (DR) and local regeneration scenario (without considering registration update), assume that user A is a SIP user in the central site and user B is a PSTN user outside a branch site, User A calls user B through the gateway in the branch site. User A and user B are engaged in an ongoing call. At this time, the active device breaks down due to the central site power outage. Then, the standby device takes over services from the active device. In this scenario, which of the following statements is CORRECT?

- **A.** The call between user A and user B will be interrupted.
- **B.** The call between user A and user B will be interrupted immediately upon power outage and then resumed.
- **C.** The call between user A and user B is not affected.
- **D.** User A can initiate new services, for example, placing a call on hold.

**Answer:** C

### Question No. 2

In the eSpace UC solution, DC service data that needs to be backed up includes recording files, CDR files, and database data.

- **A.** TRUE
- **B.** FALSE

**Answer:** A

### Question No. 3

In a multi-node centralized network, which of the following statements are CORRECT if the central node is disconnected from a local node? (Multiple Choice)

- **A.** The local node becomes an independent IP PBX and accepts registration requests from SIP users.
- **B.** On the central node, the status of the local node's users is displayed as FAULT.
- **C.** On the central node, the local node's license information is not displayed.
- **D.** On the central node, the local node's license information is still displayed.

**Answer:** A, B, C

### Question No. 4

During software installation, you can first install the eServer and then the BMU and database.

- **A.** TRUE
- **B.** FALSE

**Answer:** B

### Question No. 5

On AR routers, a call route binds an outgoing call prefix to a trunk group so that calls with the specified call prefix are transmitted on the specified trunk line.

- **A.** TRUE
- **B.** FALSE

**Answer:** A
